

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

let us not make the same stupid decision that we did with choice of cell phone modes.

i oppose this rule

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?
yes

Would the broadcast flag requirement limit consumers ability to use their existing electronic equipment (equipment not built to look for the flag) or make it difficult to use older components with new equipment that is compliant with the broadcast flag standard?
yes

Would a broadcast flag requirement limit the development of future equipment providing consumers with new options?
we need a free & open technology

What will be the cost impact, if any, that a broadcast flag requirement would have on consumer electronics equipment?
none if we don't approve this Orwellian rule

Other Comments:

Again lets not become regressive as we move into to tech-future.

I am opposed to this "flag"
